

# Cheers First Demo

Master Practical: Edge Computing and the Internet of Things - Team GAD

Aziz, Daniel, Gustav

## 3D Model

- New iteration of the 3D model
- Cables interfere with the NFC modules in the case
- Demo without case

## WIFI Manager

- If there is no gateway, the ESP creates an access point
- configure Gateway settings

### Cup Wi-Fi Manager

SSID

Password

Submit

# Demo

## Notes for Stuff to do in the PPP

- different user and provider accounts
- Mention that we could send the bar iPad public key as a “token” of sorts since OAuth, JWT tokens etc are not necessary when the device is known beforehand etc.
- Display the communication between each component in detail
- Go through the steps visually: register a user, assign a user to a cup, display the change on the cloud FE, order a few drinks with the cup, start a “game” to put the cups in the correct modes and cheers two cups
  -
